

B1
A1

1 1. (Amended) An electrical connection arrangement comprising an electrical
2 conductor track element having at least one connection portion electrically connected
3 to a connection zone of an electrical component, wherein a wall is provided in the
4 vicinity of said connection portion and said connection zone, such that a basin is
5 formed and an originally flowable molding mass is distributed in said basin, such that
6 said connection portion of the electrical conductor track element and said connection
7 zone of the electrical component are completely covered by the molding mass.

A2

1 13. (New) The electrical connection arrangement of claim 1 wherein said
2 electrical component has a body that forms a part of said basin.
